ABSTRACT

A broadcasting system made up of a central apparatus and a plurality of receivers associated with the central apparatus. The central apparatus includes means to generate printable label information, related to programs being broadcast, and included with program information that is being broadcast. The central apparatus also includes transmission means for the program and for the program information. The system also includes at least one terminal device that includes means for receiving and displaying the broadcast data, including the label that has been applied to the program, means for recording broadcast information including the label and means for printing the label on a removable recording medium.
